Digital Pathshala
by Aaryaman · AI + digital skills for work

FREE EBOOK · 2026

GEMINI IN CHROME · CLAUDE IN CHROME · RECORDED WORKFLOWS

Let AI do your browser work while you watch

Compare 10 tabs in one question, turn any page into a summary or an email, fill long forms, and teach AI a routine once — like scheduling a month of YouTube videos — so it repeats it for you.

12 ready-to-use workflows · safety rules · copy-paste prompts

youtube.com/@DigitalPathshalabyAaryaman

Two AI assistants that live in your browser

Most people copy text from a website, paste it into ChatGPT, copy the answer back and repeat. A browser assistant sits **beside the page**: it can read what you're looking at, compare tabs and, when you allow it, click and type for you.

	Gemini in Chrome	Claude in Chrome
What it is	Built into Chrome by Google	A Chrome extension from Anthropic
Cost	Chat in the browser: no paid plan needed. **Auto browse** (it clicks for you): Google AI Pro / Ultra	Paid Claude plans: Pro, Max, Team, Enterprise
In India	Desktop since 11 Mar 2026 (Hindi and 7 more Indian languages); Android since 7 Oct 2026; auto browse for AI Pro/Ultra since 7 Oct 2026	Available wherever Claude paid plans are; Chrome on desktop only
Best at	Reading, summarising and comparing up to **10 tabs**; questions about videos you play; Gmail, Calendar, YouTube	Doing multi-step work on sites; **recording a workflow** and replaying it; **scheduled** daily/weekly/monthly tasks
Safety controls	Asks before sending messages, submitting forms, scheduling events or using saved passwords; you can take over any time	Manual / Auto / Skip approval modes; per-site permissions; blocks purchases, account creation and ID/card data

Sources: Google Chrome Help (Use Gemini in Chrome; auto browse); Google India blog, 7 Oct 2026; Business Today, 11 Mar 2026; Claude Help Center (Get started with Claude in Chrome; permissions guide).

What's inside

Part 1 · Gemini in Chrome

1. Switch it on
2. Compare up to 10 tabs
3. Summarise any long page
4. Ask questions about a video
5. Page → Gmail draft
6. Auto browse a long form

Part 2 · Claude in Chrome

7. Install and set permissions
8. Record a workflow once
9. Schedule a month of YouTube videos
10. Weekly price check into a sheet
11. Calendar events from email
12. Record a skill in the Claude app

BEFORE YOU START

These agents act **as you**, inside sites where you're signed in. You are responsible for what they send, post or change. Follow the safety page (page 16) before your first real task.

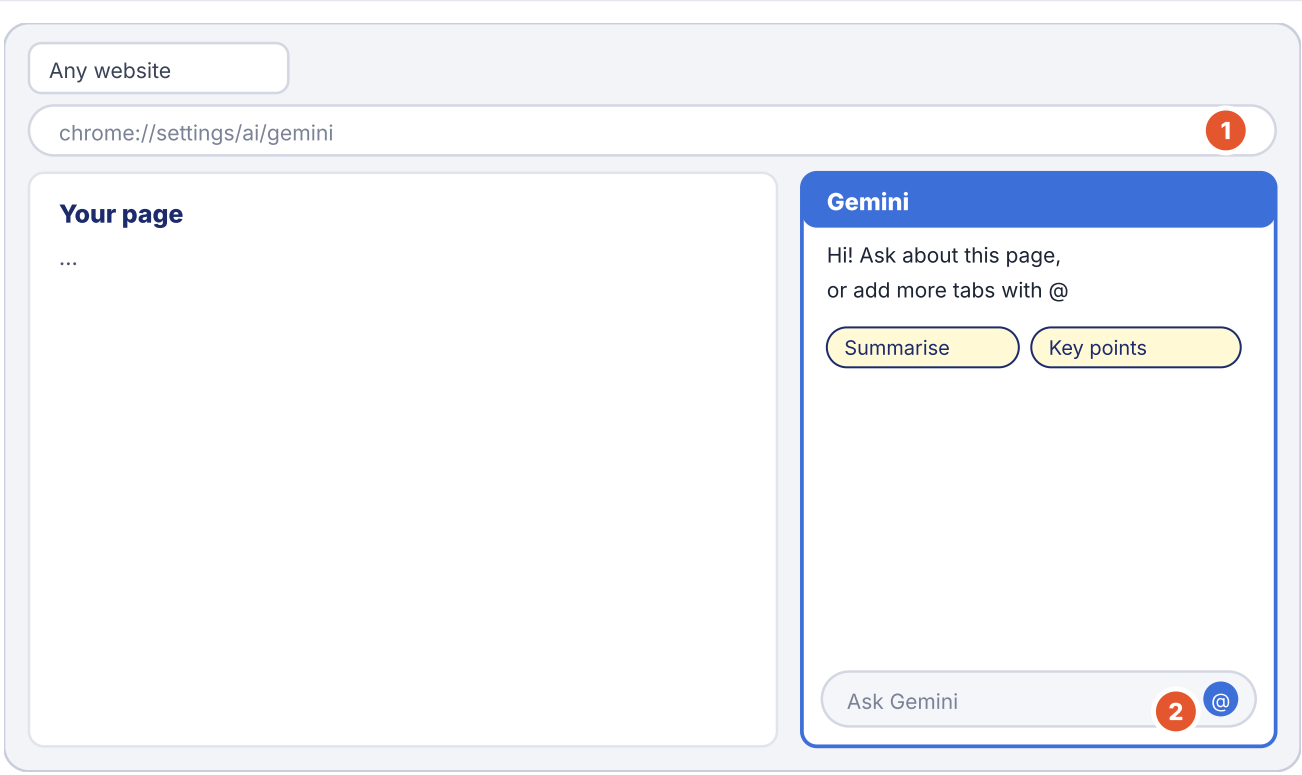

1

Gemini in Chrome

Switch on Gemini in Chrome

Two minutes, once. Then it's always one click away.

Gemini in Chrome works on Windows, Mac and Chromebook Plus with the latest Chrome, while you're signed in. It doesn't work in Incognito. Your current tab is shared with Gemini by default, so it can see what you see.

1 Ask Gemini icon at the top of Chrome

2 Type @ to add more tabs

Illustration of the layout, not an actual screenshot — your screen may look different.

Step by step

1. Update Chrome: `More (⋮) → Help → About Google Chrome`.
2. Sign in to Chrome with your Google account.
3. Click **Ask Gemini** at the top of the browser and opt in.
4. Open `Settings → AI innovations → Gemini in Chrome` to choose where it appears and turn keyboard shortcuts on.
5. Under Permissions, decide on **Share current tab by default**, microphone and **Let Gemini browse for you**.

READY-TO-USE PROMPT

```
What can you help me with on this page? Give me 5 useful questions
I could ask about it, based on what it actually contains.
```

OFFICE
Open it on any intranet or portal page.

SALES / MARKETING
Use it on competitor websites.

CREATOR / STUDENT
Use it on long articles and course pages.

2

Gemini in Chrome

Compare up to 10 tabs in one question

Stop switching between tabs to compare things.

You can share up to **10 open tabs**, even across windows, and ask one question about all of them. Gemini marks each shared tab with a check mark and a glowing underline while it reads.

1 Open the pages you want to compare

2 Type @ (or Add tabs) to share them

Illustration of the layout, not an actual screenshot — your screen may look different.

Step by step

1. Open every page you want to compare in separate tabs (up to 10).
2. Open Gemini and type **@**, or click the Add/Update tabs icon, and pick the tabs.
3. Ask for a table with the exact columns you need.
4. Ask for the source tab next to each number, so you can check it.
5. Copy the table into Google Sheets or Excel.

READY-TO-USE PROMPT

```
Compare these tabs in a table with columns: Name | Price | Key specs |
Warranty | Delivery time | Anything unusual. Use only what each page says
and write 'not stated' if a page doesn't say. Then recommend one for
[my need] in 2 lines and name the tab you took each number from.
```

OFFICE
Compare 3 vendor quotes or service plans.

SALES / MARKETING
Compare competitor pricing pages.

CREATOR / STUDENT
Compare course pages or admission rules.

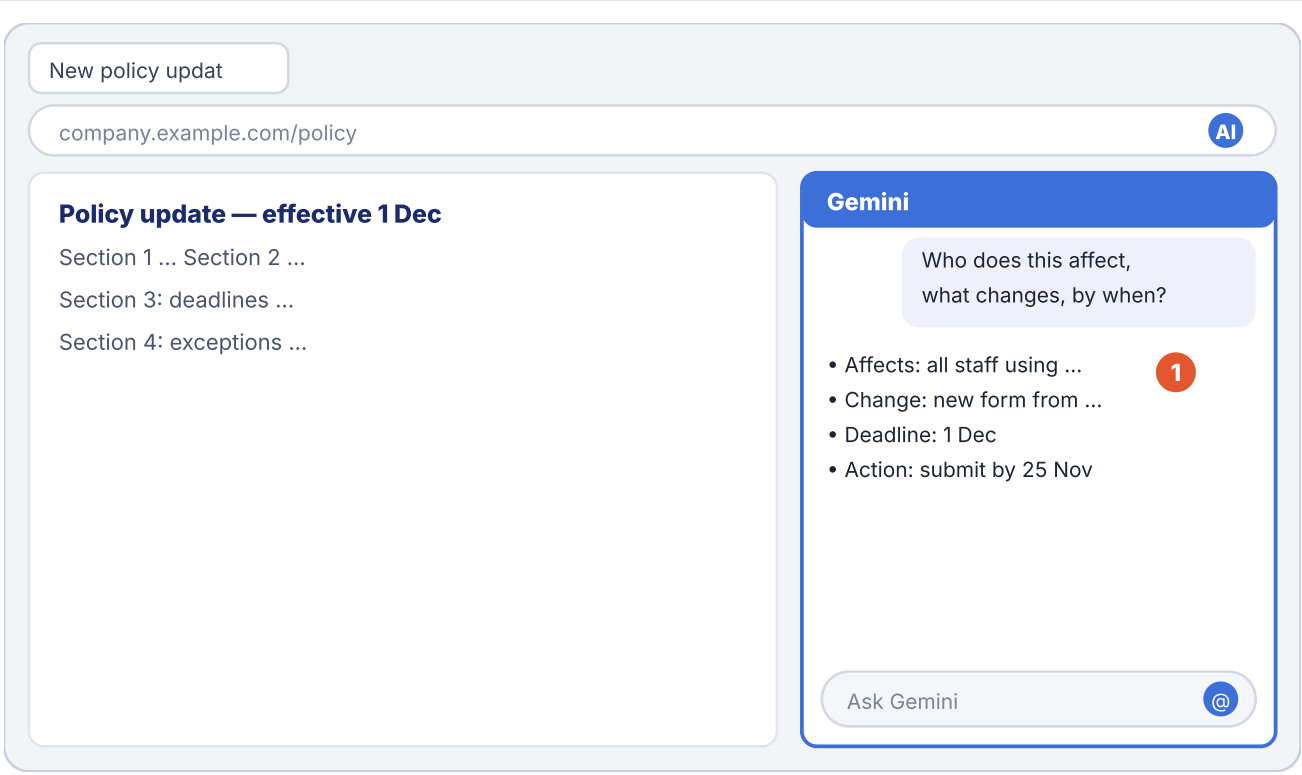

3

Gemini in Chrome

Summarise any long page into action points

A 20-minute read becomes a 1-minute brief.

Long notices, policies, reports and articles hide the 3 lines you actually need. Gemini reads the shared page and can turn it into a checklist, a table of dates or a short brief, and answer follow-up questions about it.

1 Ask for who / what / when, not just 'summarise'

Illustration of the layout, not an actual screenshot — your screen may look different.

Step by step

1. Open the page and open Gemini; the current tab is shared by default.
2. Ask a **specific** question instead of just "summarise" (prompt below).
3. Ask for dates and amounts to be **quoted exactly** from the page.
4. Ask a follow-up: "What would someone usually miss in this?"
5. For PDFs opened in Chrome, the same steps work.

READY-TO-USE PROMPT

```
Read this page and give me:
1. Who it affects (1 line)
2. What changes (max 5 bullets)
3. Every date, deadline and amount, quoted exactly
4. What I need to do, as a checklist
5. Anything unclear or missing on the page.
```

OFFICE
Turn a long circular into a checklist for the team.

SALES / MARKETING
Brief yourself on a client's website before a call.

CREATOR / STUDENT
Turn a long article into revision notes.

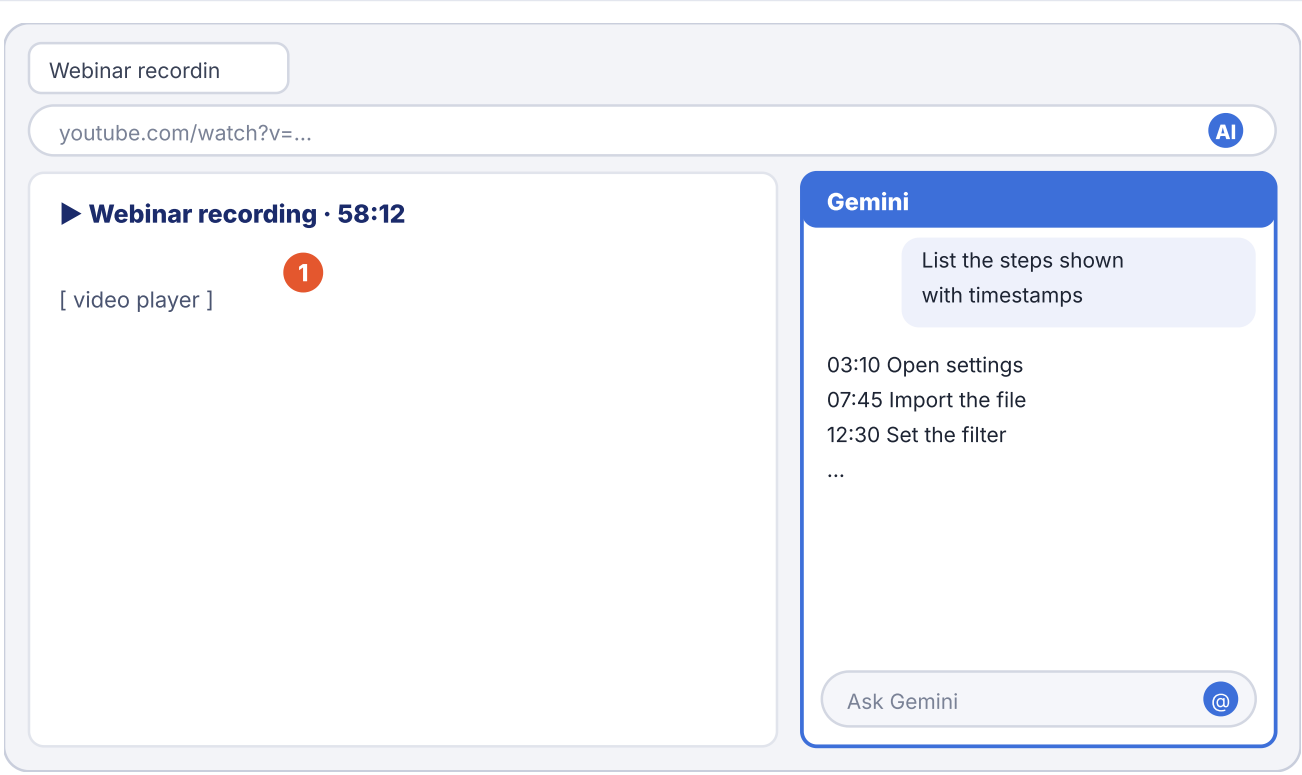

4

Gemini in Chrome

Ask questions about a video while it plays

"Where did he explain that?" — answered in seconds.

Gemini in Chrome has **media understanding** (on by default): it can answer questions about audio and video you've played in the browser, so you can get the key steps from a long tutorial or webinar without scrubbing through it.

1 Play the video in the shared tab

Illustration of the layout, not an actual screenshot — your screen may look different.

Step by step

1. Open the video in Chrome and play part of it.
2. Open Gemini and ask for steps, a summary or timestamps.
3. If it doesn't respond about the video, check `chrome://settings/ai/gemini` → Media understanding.
4. Ask for a checklist you can paste into Google Docs.
5. Use **Live** at the bottom of the panel to talk instead of typing.

READY-TO-USE PROMPT

```
From the video in this tab, list every step the speaker demonstrates,
with the timestamp for each. Then give me a 5-line summary and the
one mistake the speaker warns about.
```

OFFICE
Pull action points from a recorded training.

SALES / MARKETING
Extract claims from a competitor's product video.

CREATOR / STUDENT
Make notes from a long lecture.

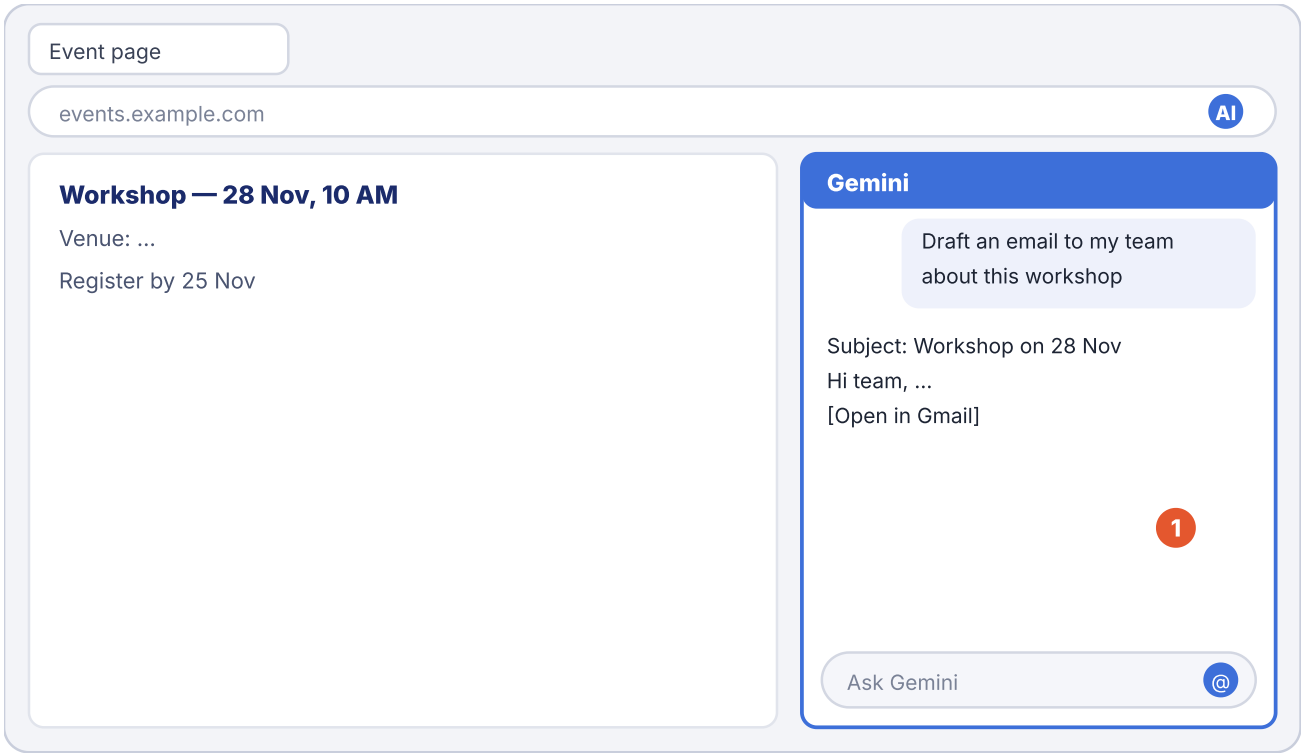

5

Gemini in Chrome

Turn any page into an email draft

From "I should tell the team" to a ready draft.

Gemini in Chrome can draft messages to send through Gmail and connect to Google apps like Calendar and Maps. Read something, ask for an email about it, review it and send it from Gmail.

1 Review the draft before it goes to Gmail

Illustration of the layout, not an actual screenshot — your screen may look different.

Step by step

1. Open the page you want to share.
2. Ask Gemini for an email: who it's to, the tone, and what you want them to do.
3. Check every date and link against the page.
4. Open the draft in Gmail, edit it and send it yourself.
5. Gemini asks before sending communications on your behalf.

READY-TO-USE PROMPT

```
Draft a short email to [who] about this page. Tone: [polite/brief].
Include: what it is, the key date and the link, and what I want them
to do by [date]. Under 120 words. Don't add anything not on the page.
```

OFFICE
Share a new policy or event with the team.

SALES / MARKETING
Send a prospect a summary of your product page.

CREATOR / STUDENT
Tell classmates about a deadline.

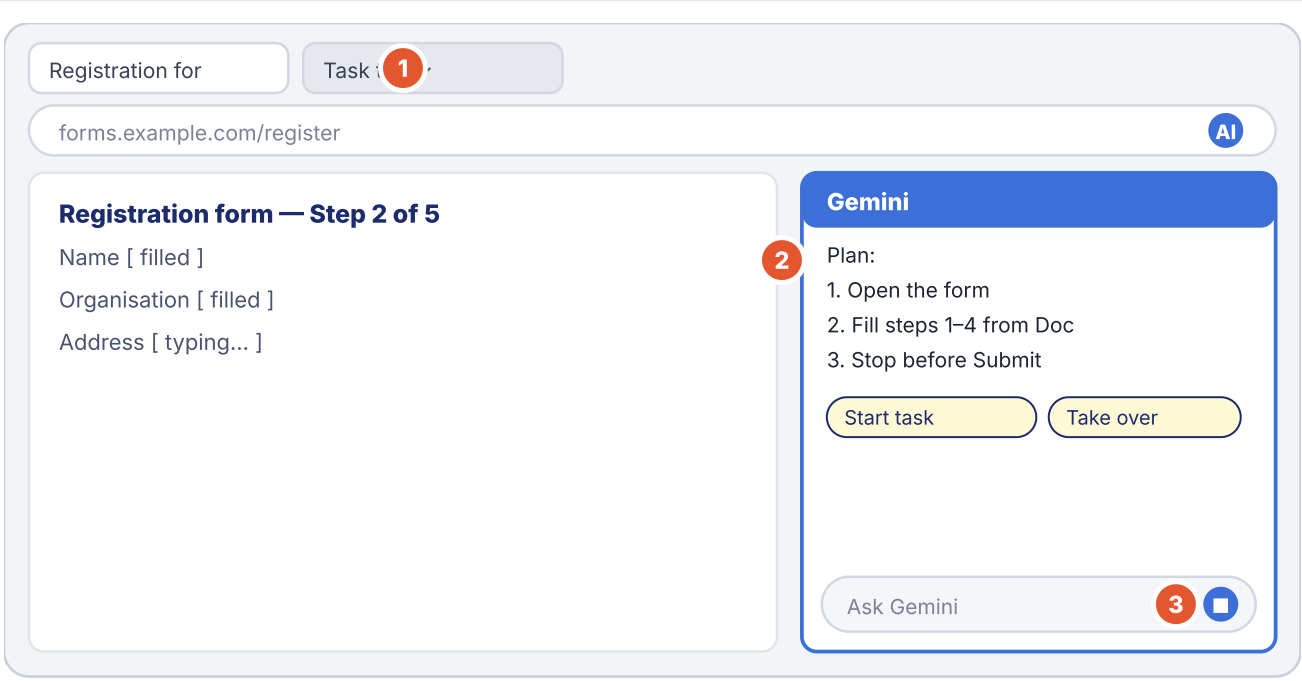

6

Gemini in Chrome

Auto browse: let Gemini fill a long form

It plans, clicks and types. You approve the important steps.

With **auto browse**, Gemini completes multi-step tasks on websites: filling long forms, gathering information, booking. It needs Google AI Pro or Ultra (Jio's free AI Pro offer qualifies), age 18+, English as the device language, and it's labelled experimental.

1 The task tab shows an auto-browse icon

2 Review the plan, then Start task

3 Stop any time

Illustration of the layout, not an actual screenshot — your screen may look different.

Step by step

1. Click **Ask Gemini**, describe the task and click Submit.
2. **Review the plan**: the sites it will use and the personal info it will enter. Then click **Start task**.
3. Watch the task tab; Chrome notifies you when it needs input.
4. Click **Take over task** to do a step yourself, then **Give back task**.
5. Gemini asks before submitting forms, sending messages or signing in. Payments and accepting terms stay with you.

READY-TO-USE PROMPT

```
Fill the form on this site using the details in my Google Doc
'[doc name]'. Stop before the final Submit button and show me a summary
of everything you entered so I can check it.
```

Google India blog (7 Oct 2026) confirms auto browse for AI Pro/Ultra in India; Google's help page still listed US-only when checked — confirm in your own Chrome. Google warns it may click the wrong link or wrongly report a task as done.

OFFICE
Fill a long vendor or event registration form.

SALES / MARKETING
Gather prices from several sites into a list.

CREATOR / STUDENT
Fill a repetitive application form.

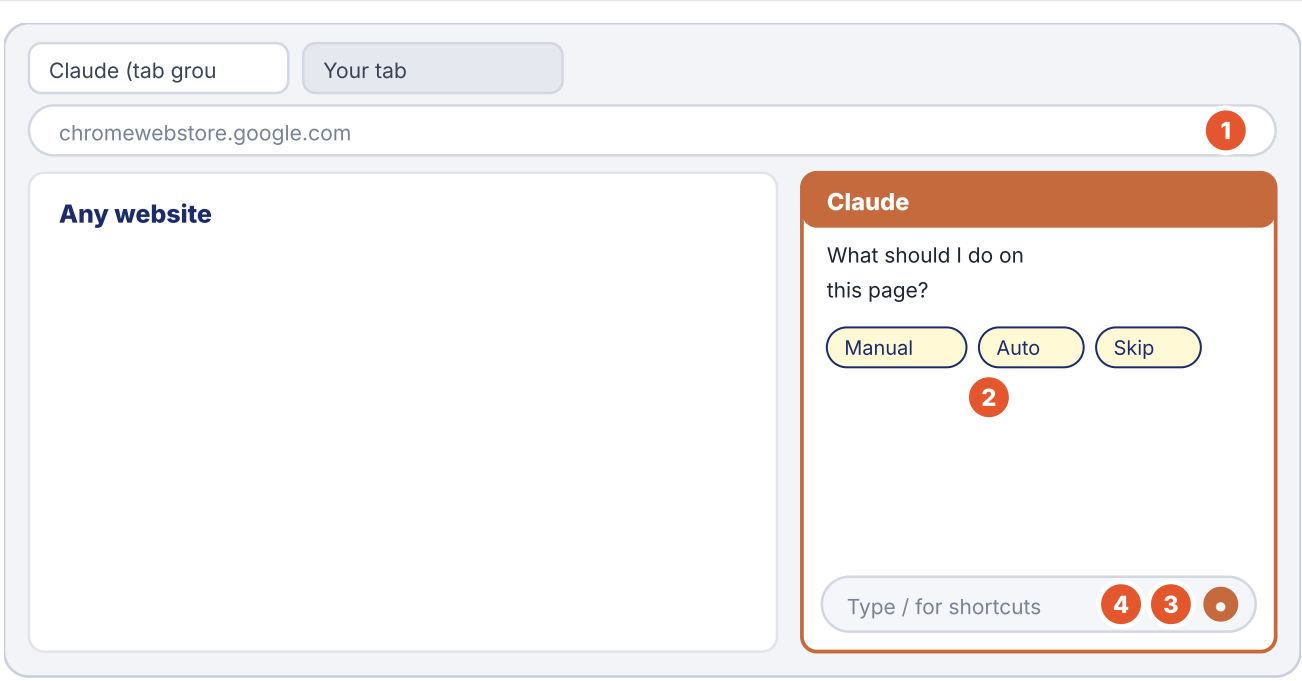

7

Claude in Chrome

Install Claude in Chrome and set it up safely

Five minutes. The permission mode is the setting that matters.

Claude in Chrome is an extension for Google Chrome on desktop, on paid Claude plans. It opens as a side panel, works across a group of tabs, and can click, type and navigate. It already knows its way around Gmail, Google Calendar, Google Docs, Slack and GitHub.

1 Pin the Claude icon
2 Choose a permission mode
3 Record a workflow (classic panel)
4 Schedule a task (clock icon)

Illustration of the layout, not an actual screenshot — your screen may look different.

Step by step

1. Open the Chrome Web Store, find **Claude in Chrome** and click **Add to Chrome**.
2. Sign in with your Claude account and grant the permissions it asks for.
3. Pin it: puzzle-piece icon → pin next to Claude.
4. Pick a permission mode in the chat box: **Manual** (asks before every action), **Auto** (default; checks each action, pauses when needed) or **Skip** (no pauses — avoid).
5. Review sites later in `⋮ → Extension settings → Permissions`.

READY-TO-USE PROMPT

```
Before doing anything, tell me your plan for this task as numbered
steps, list every site you will open, and wait for my OK.
Task: [describe]
```

Source: Claude Help Center, "Get started with Claude in Chrome" and "Claude in Chrome permissions guide". On Max, Ultra and Team the panel may run as a Cowork session; recording works in the classic panel (⋮ → Switch back to classic).

OFFICE
Start in Manual mode for the first week.

SALES / MARKETING
Use 'Allow this action' rather than 'Always allow'.

CREATOR / STUDENT
Use a separate Chrome profile without banking sites.

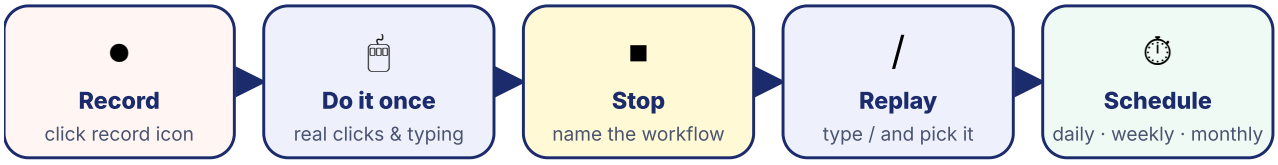

8

Claude in Chrome

Record a workflow once, replay it forever

Show Claude what you do. It saves it as a shortcut you can run or schedule.

This is the feature most people never find. Instead of writing a long prompt, you **do the task yourself once** while Claude records. Claude saves it as a shortcut. Next time, type **/** and pick it, or schedule it to run daily, weekly, monthly or yearly.

The workflow is saved as a shortcut. Claude re-reads the screen each time, so small layout changes don't break it.

Step by step

1. Open the Claude side panel (classic panel: ⋮ → **Switch back to classic** if you see Cowork).
2. Click the **record** icon in the panel.
3. Do the task normally, at a steady pace: every click, field and page change.
4. Stop recording, give the workflow a clear name ("YouTube – schedule from sheet") and save it as a **shortcut**.
5. To run it: type **/** in the chat box and pick it. To repeat it automatically: click the **clock icon** (top right) and choose daily, weekly, monthly or annually.
6. Edit or delete shortcuts any time in the extension settings.

GOOD TO RECORD

- ✔ Routine data entry on a stable site
- ✔ Copying drafts into Google Docs
- ✔ Collecting the same data from fixed sites
- ✔ Periodic checks (prices, status pages)

KEEP A HUMAN IN THE LOOP

- ✔ Messages to customers, public posts
- ✔ Anything with money, ID or health data
- ✔ Sites whose layout changes often
- ✔ Sites that make you log in every time

Sources: Claude Help Center, "Get started with Claude in Chrome" (recording, shortcuts, scheduled tasks); kazu, note.com, 18 Jun 2026 (task suitability).

9

Claude in Chrome

Schedule a month of YouTube videos

A real creator workflow: drafts + an upload-plan sheet → every video scheduled.

If your videos are already uploaded as drafts and you keep titles, descriptions and dates in a sheet, the scheduling itself is pure copy-paste: open the draft, paste the title, paste the description, set tags, choose **Schedule**, pick the date and time, save. Repeat 16 times. This is exactly what a recorded workflow is for.

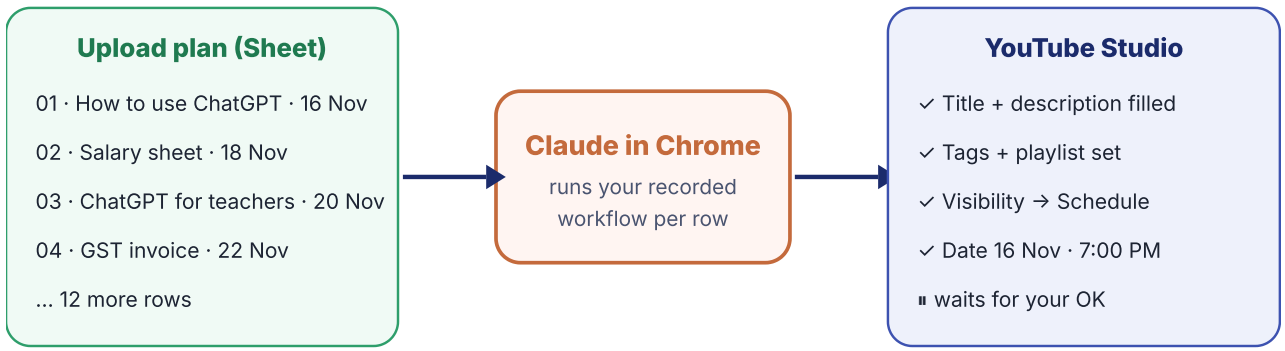

Illustration of the layout, not an actual screenshot — your screen may look different.

Set it up once (15 minutes)

1. Upload all videos to YouTube Studio as **drafts** (or Private) yourself. Keep the upload as a human step.
2. Keep one sheet with a row per video: file name, title, description, tags, playlist, date, time (IST).
3. Open the sheet and YouTube Studio as tabs and drag both into **Claude's tab group**.
4. Click **record** and schedule **one** video yourself from the sheet's first row, slowly. Stop and save it as "YouTube – schedule next row".
5. Run it with **/** for row 2 in **Manual** mode and approve each step. Once it's right, let it run row by row, checking each scheduled date.

READY-TO-USE PROMPT (WITH THE RECORDED SHORTCUT)

```
Use my shortcut 'YouTube – schedule next row'. Take rows 2 to 16 from the
Upload plan tab. For each row: find the draft whose file name matches,
fill title, description and tags exactly as in the sheet, add it to the
playlist, set Visibility to Schedule with the row's date and time (IST).
After each video, write 'Scheduled' in the Status column. Stop and ask me
if a draft is missing or a field is longer than YouTube allows.
```

CHECK BEFORE YOU LEAVE IT

Open the YouTube Studio **Content** list and sort by date: every video should show "Scheduled" with the right date. Check that the time zone in YouTube Studio is India.

WHY APPROVAL STAYS ON

Scheduling makes a video public later. Claude asks before high-risk actions like publishing; keep Manual or Auto mode, never Skip.

10

Claude in Chrome

A weekly price or status check, on autopilot

Collect the same numbers from the same sites, every Monday.

Checking 5 supplier sites, competitor prices or order statuses every week is slow and easy to forget. Save it as a shortcut, schedule it weekly, and let Claude write the results into a Google Sheet.

1 Clock icon: set it to repeat weekly

Illustration of the layout, not an actual screenshot — your screen may look different.

Step by step

1. Make a Google Sheet with columns: Date, Item, one column per site, Notes.
2. Write the prompt below and run it once in Manual mode.
3. When the result is right, save it as a shortcut ("weekly-price-check").
4. Click the clock icon and schedule it weekly (Chrome must be open on your computer).
5. Glance at the sheet each Monday; anything marked 'not found' needs a human look.

READY-TO-USE PROMPT

```
Open these pages: [URL 1], [URL 2], [URL 3]. On each, find the price of
[item] exactly as shown. Add one new row to the sheet 'Price tracker'
with today's date and each price. If a price isn't visible, write
'not found' — never guess. Don't log in or buy anything.
```

OFFICE
Track stationery or raw-material prices.

SALES / MARKETING
Track competitor prices or offers.

CREATOR / STUDENT
Track exam-result or admission status pages.

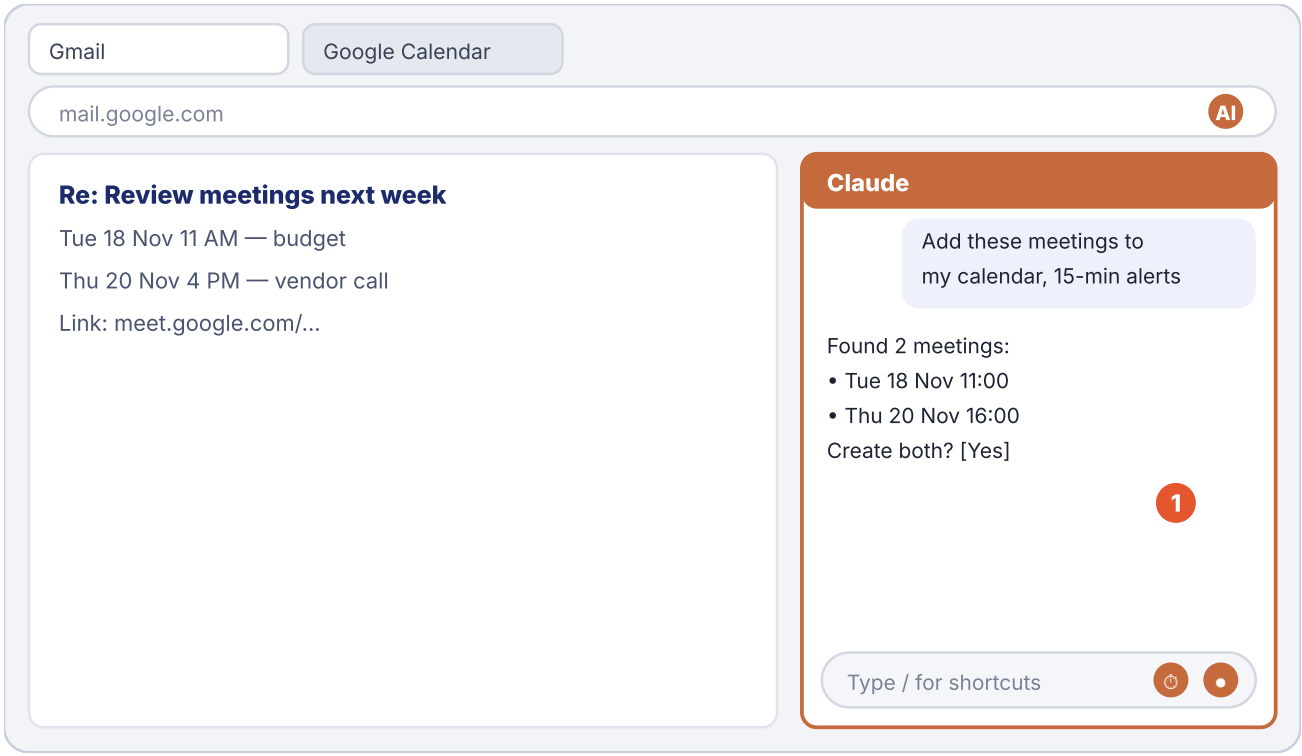

11

Claude in Chrome

Turn emails into calendar events

Meeting details buried in email → events with reminders.

Claude in Chrome already knows how Gmail and Google Calendar work. It can read an email thread you open, pull out dates and times, and create the events, asking before it saves them.

1 Confirm before events are created

Illustration of the layout, not an actual screenshot — your screen may look different.

Step by step

1. Open the email thread in Gmail and open the Claude panel.
2. Ask Claude to list every meeting it finds first, without creating anything.
3. Check the dates and times (and the time zone).
4. Approve creating the events with your reminder preference.
5. Save the prompt as a shortcut: "/email-to-calendar".

READY-TO-USE PROMPT

```
From the email open in this tab, list every meeting or deadline with
date, time (IST), title and link. Show me the list first. After I say
yes, create each one in Google Calendar with a 15-minute reminder and
the link in the description. Don't email anyone.
```

OFFICE
Turn meeting threads into calendar events.

SALES / MARKETING
Add client follow-up dates from email.

CREATOR / STUDENT
Add exam and assignment dates from college emails.

12

Claude in Chrome

Record a skill in the Claude app

Narrate a task once on your screen. Claude turns it into a reusable skill.

Since July 2026 the Claude desktop app's **Cowork** mode has **Record a skill**. You record your screen while doing a task and **explain out loud why** you do each step. Claude turns it into a skill in your library that it can run again, using Claude in Chrome for the browser parts.

	Record workflow (Chrome panel)	Record a skill (Claude app)
Where	Claude in Chrome classic side panel → record icon	Claude desktop app → Cowork → **+** → Record a skill
What it captures	Your clicks, inputs and page changes in Chrome	Screen, clicks, keystrokes **and your voice** explaining the rules
Saved as	A shortcut (run with **/**, schedule with the clock)	A skill in your skill library
Best for	Browser-only routines	Tasks with decisions and rules, across apps
Plans / platform	Paid plans; Chrome on desktop	Pro, Max, Team; help docs list Mac (check the + menu on Windows)

Step by step

1. **Prepare the screen:** close notifications, hide passwords and tokens, and use sample data. Everything visible can end up in the skill.
2. Open a Cowork task, click **+** in the message box and choose **Record a skill**. Allow screen recording and microphone access.
3. Do the task once and **narrate the rules**: "I skip rows with no date", "I stop when the total matches". Recordings run to about 10 minutes.
4. Stop. Claude drafts the skill and may ask questions about anything unclear.
5. **Review the draft:** is the purpose clear, did any private details leak in, are the edge cases written down?
6. **Test it on a fresh file**, not the one you demonstrated with.

WHAT TO SAY WHILE RECORDING (EXAMPLE: WEEKLY REPORT)

```
"Every Monday I download last week's sales export from this site.
I open it, delete the test orders — they always start with TEST.
I make a pivot by city, copy the totals into this sheet, and if any
city drops more than 20% I highlight it red. I'm done when the grand
total matches the export total."
```

Sources: Android Authority, 21 Jul 2026; CyberSecurity News, 21 Jul 2026; SentiSight, "How to record repeatable skills in Claude" (citing Anthropic's help documentation).

Which tool for which job?

Read, summarise or compare pages	**Gemini in Chrome (free)**
Questions about a video you're playing	**Gemini in Chrome**
Fill one long form, once	**Gemini auto browse / Claude**
Repeat the same browser routine	**Claude: record workflow**
Run it every week by itself	**Claude: scheduled shortcut**

Prompt habits that make browser agents reliable

Habit	Add this line to your prompt
Plan first	"Show me your plan and the sites you'll open, then wait for my OK."
No guessing	"If something isn't on the page, write 'not found' — never guess."
A clear stop	"Stop before Submit / Send / Publish and show me a summary."
Exact copy	"Copy titles, dates and amounts exactly as written."
A log	"After each item, write the status in the sheet's Status column."
Boundaries	"Don't log in, buy anything or email anyone."

★ **The rule that saves you:** run every new routine once in **Manual** mode and watch it. Only then schedule it.

Safety: what to never delegate

A browser agent can see everything on the page and acts as you. Both companies say clearly that you're responsible for what it does.

Claude in Chrome blocks, in every mode

- ✔ Purchases and financial transactions
- ✔ Creating accounts
- ✔ Handling card or ID data
- ✔ Downloads from untrusted sources
- ✔ Following instructions found in emails or web pages

Always asks before: changing permissions, granting authorisations, entering sensitive information, permanent deletions.

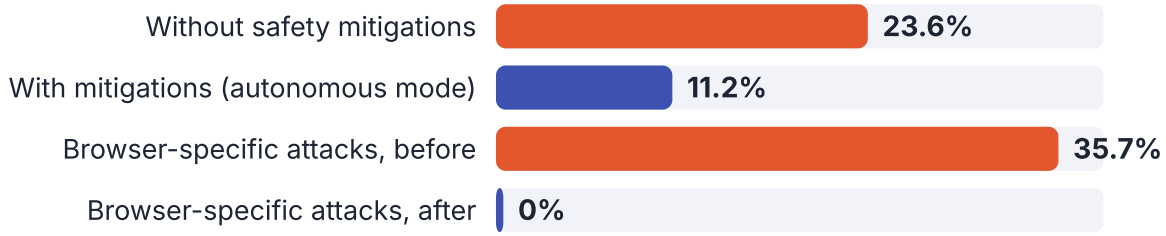

Gemini auto browse asks before

- ✔ Starting a task
- ✔ Sending communications
- ✔ Changing your data or submitting forms
- ✔ Scheduling events
- ✔ Using saved passwords or Sign in with Google

You take over for: finishing payments, accepting terms, creating accounts.

Why the safeguards matter: hidden-instruction attacks on browser agents

Anthropic's own tests of Claude in Chrome, Aug 2025 (123 test cases, 29 attack scenarios)

Lower is better. Even with defences, roughly 1 in 9 attacks still worked in that test, which is why approvals stay on. Google says it trains Gemini to detect these attacks too.

Source: Claude, "Piloting Claude for Chrome" (Aug 2025, updated Dec 2025); Google India blog, 7 Oct 2026.

Six rules

1 · Use a **separate Chrome profile** without banking, government or health sites.

2 · Don't open the panel on pages with **private documents**.

3 · Start with **trusted sites** and simple tasks.

4 · Prefer **"Allow this action"** over "Always allow".

5 · **Stop immediately** if it opens unexpected sites or asks for personal data.

6 · Never use **Skip all approvals** for anything that posts, sends or deletes.
