CHATGPT · GPT-6 · INTELLIGENT UI

# Ask ChatGPT for a tool, not an answer

Since October 2026 ChatGPT can answer with calculators, charts, forms, sliders and mini games you use right inside the chat — free. How it works, how to trigger it, 12 ready-to-use office prompts, and how to check what it builds.

**8 Oct 2026**
Intelligent UI reached Free and Go users

**0**
special commands needed — ChatGPT picks the format

**Simple**
the setting that tones the visuals down

Works on Free and Go in India (tested by Digital Pathshala) · facts checked 12 Nov 2026

# What Intelligent UI is

With GPT-6, ChatGPT can **compose answers from text, visuals and interactive elements** — choosing the mix to fit your question. Instead of a paragraph about a calculation, you can get a calculator.

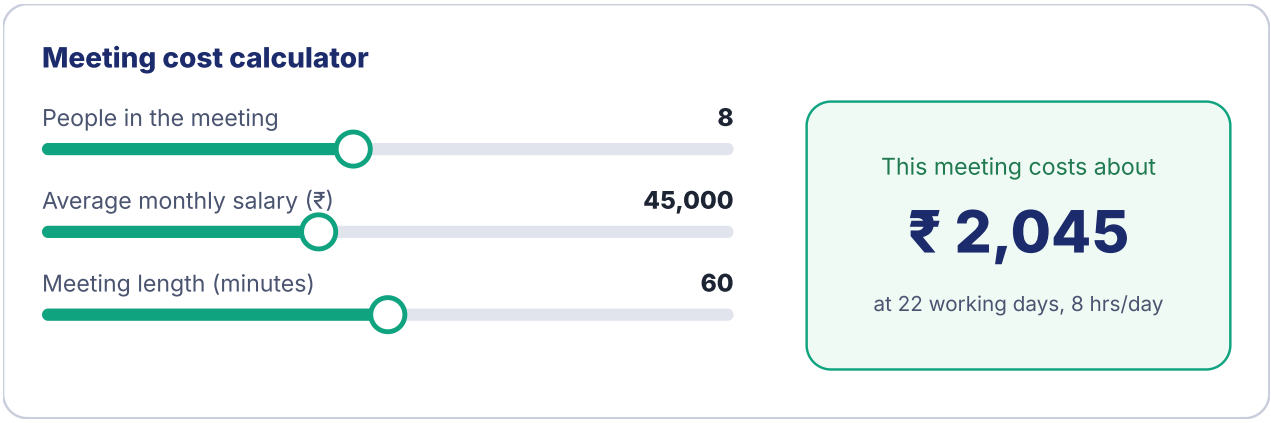

*Illustration of the idea, not an actual ChatGPT screenshot.*

## What it can put in an answer

**Visuals**
Graphics, charts, diagrams, maps, side-by-side comparisons

**Controls**
Tappable buttons, forms, sliders that change the answer

**Mini tools**
Calculators, bill splitters, quizzes, small games

## Who gets it

| Plans | Model | From |
|---|---|---|
| Plus, Pro, Business, Enterprise | GPT-6 Sol | 7 Oct 2026 (Enterprise depends on admin settings) |
| **Free and Go** | GPT-6 Luna | **8 Oct 2026** |

**INDIA**

Tested by Digital Pathshala on Free and Go accounts in India: interactive answers appear.

Sources: OpenAI announcement "GPT-6 and Intelligent UI in ChatGPT" (OpenAI Developer Community); TechCrunch, 7 Oct 2026; Tech Insider; The AI Career Lab summary of OpenAI's help article.

# 1 How it decides, and how to make it happen

No command needed — but the way you ask matters.

- There is **no separate mode or toggle**: ChatGPT decides per question whether text, a visual or an interactive answer fits best.
- A comparison may come side by side; an explanation may use an interactive diagram; a simple question still gets plain text.
- The interface builds **progressively** while the answer is written.
- It doesn't always happen on the first reply. In TechRadar's tests, an itinerary became interactive only after asking to change the budget.

## The formula that triggers a tool

| Part | Example words |
|---|---|
| **1 · Ask for the tool** | "Build me an interactive calculator / a chart I can adjust / a quiz..." |
| **2 · Name the inputs** | "...with sliders for people, salary and minutes" |
| **3 · Name the output** | "...showing the cost in rupees" |
| **4 · State the assumptions** | "...assume 22 working days and 8 hours a day" |
| **5 · Follow up** | "Make it adjustable", "Add a slider for...", "Show it as a chart" |

**TRY IT NOW**

```
Build me an interactive meeting cost calculator with sliders for number
of people, average monthly salary in rupees and meeting length in
minutes. Show the cost of the meeting in rupees. Assume 22 working days
a month and 8 hours a day, and show the formula you used.
```

Behaviour: OpenAI announcement; Tech Insider; TechRadar, 8 Oct 2026. The prompt formula is ours.

# 2 Office tools you can make in seconds

Prompts 1–6: money, comparisons, plans and learning.

**1 · BILL SPLITTER FOR A TEAM LUNCH**

```
Build an interactive bill splitter: total bill in rupees, number of people, tip % slider, and a list where I can mark who skipped dessert so they pay less. Show each person's share.
```

**2 · PRICE COMPARISON WITH YOUR PRIORITIES**

```
Compare these 3 options in an interactive table with sliders for how much I care about price, delivery time and warranty, and show which option wins as I move the sliders: [paste the 3 options with their details].
```

**3 · BREAK-EVEN HELPER FOR A SMALL PRODUCT**

```
Build an interactive calculator: fixed monthly cost, cost per unit and selling price per unit (all in ₹). Show how many units I need to sell to break even, with a chart of profit vs units sold.
```

**4 · PROJECT TIMELINE YOU CAN DRAG**

```
Show this project plan as an interactive timeline where I can change the duration of each task and see the end date move: [paste tasks with durations, start date].
```

**5 · QUIZ FROM YOUR NOTES**

```
Turn these notes into an interactive quiz: 10 multiple-choice questions, one at a time, showing whether I was right and why, and my score at the end: [paste notes].
```

**6 · EXPLAIN WITH A DIAGRAM YOU CAN PLAY WITH**

```
Explain how compound interest works with an interactive chart: sliders for amount, rate and years, comparing simple vs compound interest.
```

**If it replies with plain text:** follow up with *"Make this interactive"* or *"Add sliders for..."*.

# 3 Planning, charts and decision tools

Prompts 7–12: converters, calendars, data and choices.

**7 · UNIT AND TIME-ZONE CONVERTER**

```
Build an interactive converter for my work: IST to US Eastern, UK and Dubai time with a time slider, and show which slots fall inside 9 am – 6 pm for everyone.
```

**8 · CONTENT CALENDAR CHECKER**

```
Make an interactive weekly content planner: I pick the number of posts per week and the platforms, and it lays out a 4-week calendar I can reshuffle by clicking.
```

**9 · SURVEY RESULT CHART**

```
Here are survey responses: [paste counts]. Show them as an interactive chart I can switch between bar and pie, with percentages.
```

**10 · LOAN OR EMI EXPLORER**

```
Build an interactive EMI explorer: loan amount, interest rate and tenure sliders, monthly EMI, total interest, and a chart of principal vs interest over time.
```

**11 · EXAM COUNTDOWN PLANNER**

```
Build an interactive study planner: exam date, chapters left and hours per day. Show a day-by-day plan and warn me if it doesn't fit.
```

**12 · DECISION HELPER**

```
Help me choose between [option A] and [option B]. Build an interactive weighted scorecard where I set the importance of 5 criteria and see the result update.
```

**If it replies with plain text:** follow up with *"Make this interactive"* or *"Add sliders for..."*.

# 4 Where it doesn't work, and how to check it

An interactive answer is not automatically a correct answer.

## Where you won't see it

| Place | Status |
|---|---|
| ChatGPT **Work** tab and **Codex** | Not part of Intelligent UI |
| **Voice** conversations | Not supported |
| **Pro reasoning** option (GPT-6 Astra) | Doesn't support Intelligent UI |
| Older macOS / Windows desktop app versions | Reported not to support it — update the app |

## The 4 checks before you use a tool for work

1. **Ask for the formula.** "Show the formula you used" — then check it by hand once.
2. **Test an easy case.** Put in numbers where you know the answer (e.g. 1 person, 1 hour).
3. **Check the inputs it assumed.** Days per month, tax rates, conversion rates — ask it to list every assumption.
4. **Verify facts in comparisons.** TechRadar found an *estimated* battery-life figure in a laptop comparison. Check specs and prices on the official page.

**REMEMBER**

Visuals are only as accurate as the numbers and formulas behind them. For anything you'll send or sign, rebuild the final number in Excel or Google Sheets.

Sources: Tech Insider (Work tab, Codex, Astra); The AI Career Lab summary of OpenAI's help article (Voice, desktop apps); TechRadar, 8 Oct 2026.

# 5 Too many visuals? Turn them down

You can reduce Intelligent UI, but not switch it off completely.

| Option | How | Effect |
|---|---|---|
| **Setting (web)** | `Settings → Personalization → Layout and visuals → Simple` | OpenAI: "reduces visual and interactive elements"; some may still appear |
| **One chat** | Ask: *"Answer in plain text only, no charts or interactive elements."* | Works for that answer |
| **Every chat** | Add the same line to your custom instructions | Guides ChatGPT; not a guarantee |

A matching setting in the mobile apps wasn't confirmed at the time of writing; check your app's Personalization settings.

## Copy and edit what it builds

- ✔ Need the numbers in a sheet? Ask: *"Give me the same result as a table I can paste into Excel."*
- ✔ Need it in a report? Ask for a plain-text summary with the formula and assumptions.
- ✔ Want to reuse a tool? Keep the prompt in a note; the same prompt rebuilds it.

## Your first week

| Day | Try |
|---|---|
| 1 | The meeting cost calculator (page 3) |
| 2 | A bill splitter for your next team lunch |
| 3 | A price comparison with your own priorities |
| 4 | A quiz from your own notes |
| 5 | An interactive timeline for a real project |
| 6 | Run the 4 checks on one tool |
| 7 | Try the Simple setting and compare |
